### AMENDMENTS TO THE CLAIMS

This listing will replace all prior versions and listings of the claims in the above-identified application:

20-22 (cancelled)

23. (previously presented) ~~The A bobbin-style electrochemical cell as defined in claim 22,~~  
comprising:

a cylindrical can having an open end and a side wall;

a cover, positioned over the open end, consisting of a base and a peripheral wall  
extending axially away from the base wherein the peripheral wall has a terminal edge positioned  
radially outside of the outer the side wall;

a first adhesive disposed between at least a portion of an outer-facing length of the  
side wall and the peripheral wall so that the cover and the can are adhesively secured to form a non-  
crimped electrochemical cell container and wherein the can and the cover define an internal  
chamber in the non-crimped container;

a second adhesive disposed between the cover and the can wherein the first and  
second adhesives are located such that the first adhesive is axially closer to the open end relative  
to the second adhesive;

a first electrode disposed within the internal chamber of the non-crimped container;

a second electrode disposed within the internal chamber of the non-crimped  
container, wherein the second electrode is in contact with the side wall along substantially all of an  
entire inner-facing length of the side wall; and

a current collector disposed within the internal chamber, said current collector in  
electrical contact with the cover at one end and completely surrounded by the first electrode at an  
opposing end; and

an alkaline electrolyte solution disposed within the internal chamber of the non-crimped  
container.
